

App Flow Document: Vibe Problem Solver

Overview

This document maps the complete user journey for the Vibe Problem Solver MVP—a linear, field-first funnel from domain selection to exportable artifacts. All flows prioritize conversion (reach roadmap in <5 clicks) with mobile-first navigation, clear CTAs, and fallback error states. Primary path: Onboard → Feed → Solution → Roadmap → Export.

User Types: Guest (read-only), Authenticated (save/export), Pro (unlimited gens).

Navigation: Next.js App Router (URL-driven), bottom nav mobile, breadcrumb desktop.

Entry Points: / (onboard or feed), /feed, deep links (/problem/[id]).

Primary User Journeys

Journey 1: New User Discovery → First Roadmap

Goal: From signup to exported roadmap (<10 min). Success: 40% activation rate.

text

1. LANDING → ONBOARDING (0-30s)

[Guest hits /] → [Domain chips: Tech • Finance •] → [Select 1-5] → [/feed?domains=tech,finance]

Decision: "Skip" → Default domains → Feed

2. PROBLEM FEED → SOLUTION VIEW (30s-2min)

[Pi-ranked cards] → [Tap card #3: "React iOS crash"] → [/problem/abc123]

[6-layer solution auto-loads] → [Edit layers? Y/N]

3. CREATE ROADMAP (2-5min)

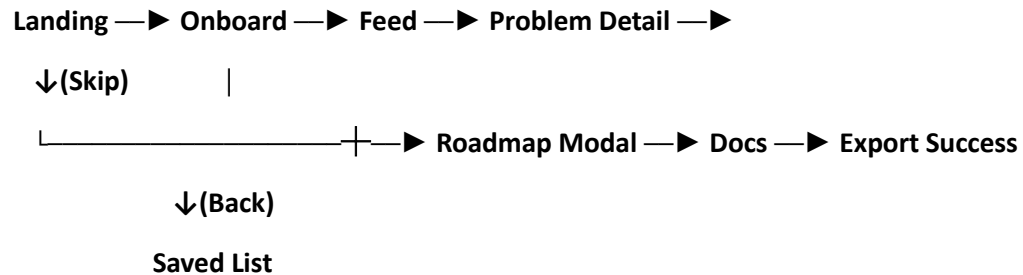

[Big CTA click] → [Modal: Team Size slider] → [Phases render] → [Export MD/PDF]

4. DOC GENERATION → EXPORT (5-10min)

[Checklist: PRD ✓ TechDoc ○] → [Generate TechDoc] → [Download ZIP]

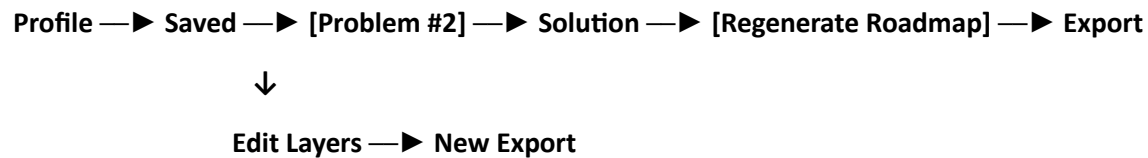

Text Flow Diagram:

Screen-by-Screen Flows

1. Landing/Onboarding (/onboard)

Purpose: Domain selection (irreversible first action).

Components: Hero title, chip grid, progress bar.

Actions & Navigation:

- Select domain → Real-time feed preview → "Show Problems" → /feed
- Skip → Default (Tech, Business) → /feed
- Auth CTA → Clerk modal → Persist domains to profile
Links To: /feed
Exit Conditions: Browser back → Landing

2. Problem Feed (/feed)

Purpose: Scannable high-pain problems.

Components: Filter bar, infinite scroll cards, saved count.

Actions & Navigation:

User Action	Outcome	Navigation
Filter: Domain=Tech	Re-rank + animate	Same URL, state preserved
Search: "React"	Filter overlay	/feed?search=react
Tap ProblemCard	Load solution	/problem/[id]

User Action	Outcome	Navigation
Save/Heart	Toast + counter++	POST /api/save, local optim.
Profile icon	Dropdown: Saved, Settings	Modal overlay

Back Navigation: ← Problems breadcrumb.

3. Problem Detail / Solution (/problem/[id])

Purpose: Layered solution + roadmap trigger.

Actions:

- Expand Layer 1-6 → Smooth height animation
- Edit field → Auto-save to /api/solutions
- "Create Roadmap" → Modal (/roadmap/[solutionId]?team=solo)
- "Related Problems" → Carousel below

4. Roadmap Modal (Overlay)

Purpose: Phased execution plan.

Components: Team size selector, phase timeline, export buttons.

Actions:

Action	Result
Team: Solo → Small	Recompute durations

Action	Result
Phase expand	Nested task checklist
Export MD	Download roadmap-[id].md
"Generate Docs"	→ Doc Overlay

Close: ESC or X → Return to Solution View.

5. Document Overlay (Split-Screen)

Purpose: Editable artifact generator.

Actions:

- Checklist toggle → Load doc type
- "Regenerate" → LLM spinner → New content
- Export → ZIP (all docs) or single PDF

Error Flows & Fallbacks

Scenario	Trigger	Response	Navigation
No Domains Selected	First load	Auto-select top 3 + "Choose yours" nudge	/onboard

Scenario	Trigger	Response	Navigation
No Problems Found	Empty domain/feed	"No high-pain problems yet. Try: [Related chips]" + manual search	Stay /feed
LLM Timeout	Generate fail	Template skeleton + "Retry" + offline edit	Stay screen
Rate Limit	Pro feature spam	Toast: "Chill, [X] min left" + progress bar	Stay screen
Network Error	Offline	Cache-first (localStorage) + sync queue	Retry button
404 Problem	Stale ID	"Problem archived. View similar → [3 cards]"	/feed

Global Error Boundary: Sentry capture → User-friendly toast → /feed.

Decision Trees

Domain Selection

text

Start

|— Select 0 domains? → Show warning → Back to chips

|— Select 1-5 → Proceed to feed ✓

└— Select 6+ → "Narrow to top 5?" → Auto-trim

Roadmap Generation

text

Click "Create"

|— Authenticated? → Generate

|— Guest? → "Sign up to save?" → Clerk modal → Generate

└— Pro limit hit? → Upgrade nag → Fallback template

Mobile Bottom Navigation

text

Tab 1: Feed (default) Tab 2: Saved Tab 3: Roadmaps Tab 4: Profile

|  Problems |  Saved (3) |  My Roadmaps |  Domains + Tier

| | | (2 complete) | Pro: Unlimited

Swipe Gestures: Left→Saved, Right→Profile (mobile only).

State Management Flow

text

URL Change —▶ Prefetch data (RSC) —▶ Optimistic UI —▶

↓

↓

Hydration ———▶ Supabase realtime —▶ Sync (conflicts → toast)

Realtime Updates: New high-Pi problems → Feed insert animation at top.

Metrics & Success Criteria

Flow Metric	Target
Onboard → Feed	<30s, 90% completion
Feed → Roadmap	<5 clicks, 40% conversion
Roadmap → Export	70% download rate
Error Recovery	<10% abandon on error

Implementation Notes

- Deep Linking: All screens support `/feed?domain=tech#problem-abc`
- PWA Ready: Install prompt after first roadmap export
- A/B Test: Feed sort (Pi vs Trending) on 50% users
- Next Steps: Import to Miro/Lucidchart (Day 1), dev confirmation (Day 2)

Export Formats: Mermaid diagram, PDF flow, CSV transitions. Ready for Figma flow prototype.
