

Design Document: Vibe Problem Solver

Overview

The Vibe Problem Solver features a mobile-first, card-based UI built with Next.js, Tailwind CSS, and Framer Motion for smooth animations. Design prioritizes clarity, speed, and conversion: users select domains → scan high-pain problems → drill into solutions → export roadmaps/docs in under 10 minutes. Primary screens follow a linear funnel with minimal navigation friction.

Key Principles:

- Card-based feed (like Product Hunt/Twitter).
- Frictionless CTAs ("Create Roadmap", "Generate PRD").
- Dark/Light mode toggle; neutral palette for focus.
- Micro-animations on hover/scroll for engagement.

Design System

Element	Primary	Secondary	Usage
Colors	#0F172A (slate-900), #F1F5F9 (slate-50)	#3B82F6 (blue-500 accent), #10B981 (green success)	Backgrounds, CTAs, Pain Index bars
Typography	Inter (sans-serif): H1 32px bold, Body 16px	Mono for code stubs (JetBrains Mono)	Headlines, docs, API examples
Spacing	4px grid (p-1=4px, p-4=16px)	Responsive: sm:gap-4, lg:gap-6	Cards, modals, lists

Element	Primary	Secondary	Usage
Shadows	Default: shadow-md; Elevated: shadow-xl	None for flat cards	Problem cards, modals
Borders	1px #E2E8F0 (slate-200)	Rounded: border-md	All cards, buttons

Color Palette (Tailwind classes):

css

--primary: #0F172A;

--accent: #3B82F6;

--success: #10B981;

--warning: #F59E0B; /* Pain Index yellow */

--danger: #EF4444;

Responsive Breakpoints: Mobile-first (sm:640px, md:768px, lg:1024px, xl:1280px).

Key Screens & Flows

1. Onboarding (Field Selection)

Purpose: First-run domain picker (5s max).

text

[Header: "What domains interest you?"]

[Multi-select chips: Education • Finance • Tech • Healthcare • Custom]

[Examples tooltip on hover]

[CTA: "Show Problems" → Problem Feed]

[Secondary: "Refine later"]

- Layout: Full viewport, centered chips (3 per row mobile).
- Animation: Fade-in stagger for chips; scale on select.
- Figma Stub: 375x812px artboard.

2. Problem Feed (Core Screen)

Purpose: Scannable ranked list (infinite scroll).

text

[Filters: Domain ▼ Difficulty ▼ Trending ▼ Search]

[Sort: Pain Index ▼]

[Card Grid: 1-col mobile, 2-col desktop]

[Footer CTA: "Saved Problems (3)"]

Problem Card (300x200px mobile):

text

[Pi Bar:  — 8.7/10] [Difficulty: Medium ●]

"React Native crashes on iOS 18 background fetch"

Sources: Reddit(12), HN(3) ● Trending +23%

[View Solution] [Save]

- Hover: Lift + expand metadata.

- Microcopy: "High pain = urgent opportunity".

3. Solution View (Layered Detail)

Purpose: Expandable solution layers.

text

[Back: ← Problems] [Problem Title]

1. **Headline**: "Background fetch wrapper + retry queue"

2. **Approach**: • Bullet 1 • Bullet 2

3. **Execution**: 1. Scaffold API → 2. Tests → 3. Deploy

[Tech Stack Table]

[Experiments Table]

[Big Blue CTA: "Create Roadmap →"]

- Accordion: Click layer → expand/collapse.
- Editable: Inline edit → Save to profile.

4. Roadmap Modal (Full-Screen Overlay)

Purpose: Phased plan generator + export.

text

[Team Size: Solo • Small Team • Large]

[Phase 1: Discovery] [1-2w] [Tasks ✓] [Artifacts]

[Phase 2: Design] [2-3w] ...

[Export: MD PDF CSV Kanban]

[Generate Docs Checklist]

- Animation: Slide-up from bottom; phase expand on click.
- Progress: Visual timeline bar across top.

5. Document Generator Overlay

Purpose: Inline editor for PRD/Tech Doc.

text

[Docs Checklist: PRD ✓ Tech Doc ○ Auth Flow ○]

[Editor Pane: Markdown preview + raw]

[Version: v1.2] [Export MD/PDF] [Regenerate]

- Split view: 50/50 editor/preview.
- AI Assist: "Improve section" button per heading.

Navigation & Flows

Primary Path (Linear Funnel):

text

Onboarding → Feed → Solution → Roadmap Modal → Doc Overlay → Export Success

Global Elements:

text

[Top Nav: Logo | Profile (Domains ▼ Saves) | Dark/Light]

[Bottom Nav Mobile: Feed | Saved | Roadmaps]

State Management (URL-based):

- /onboard → /feed?domain=tech&sort=pain
- /problem/[id] → /roadmap/[solutionId]?team=solo
- Back/forward browser preserved.

UI Components Library

Component	Props	Usage	Animation
ProblemCard	problem, onView, onSave	Feed	Lift on hover, Pi pulse
PainBar	score: 0-10	Cards	Gradient fill L→R
LayerAccordion	layers: []	Solution	Smooth height transition
PhaseTimeline	phases: []	Roadmap	Progress dots + connectors
DocEditor	content: string, type	Overlay	Real-time preview sync
ChipSelect	options: [], multi	Onboarding/Filters	Scale + ripple on tap

Reusable in Figma: Component library with variants (selected/hover/error).

Wireframes & Mockups (Text-Based)

Motion Design

- Page Transitions: Fade + slide (Framer Motion <AnimatePresence>).
- Microinteractions:
 - Card save: Heart scale + burst.
 - Generate button: Loading spinner → Success checkmark.
 - Pi bar: Fill animation on load (0→score).
- Performance: 60fps target; <motion.div initial={{opacity:0}}> on all cards.

Accessibility & i18n

- WCAG 2.1 AA: ARIA labels on cards (aria-label="Pain Index 8.7"), keyboard nav.
- Focus States: Blue ring on all interactive elements.
- Screen Reader: Problem summary → Pi → Actions.
- RTL Ready: Tailwind RTL plugin for future markets.
- Localization: next-intl; English default.

Figma File Structure (Ready-to-Import JSON Stub)

text

Vibe Problem Solver

- ├─  Design System (Colors, Typography, Components)
- ├─  Screens (Onboarding, Feed, Solution, Roadmap, Docs)
- ├─  Components (ProblemCard, Phase, PainBar variants)
- ├─  Flows (Primary Funnel, Mobile Nav)

└─  States (Loading, Error, Empty)

Import Instructions: Copy components to your Figma → Replace placeholders with real content.

Handoff & Implementation Notes

- **Dev Notes:** Tailwind classes inline; Framer Motion for all transitions.
- **Assets:** SVG icons (Heroicons); No custom illustrations (MVP).
- **Testing:** Storybook for components; Percy for visual regression.
- **Next Steps:** Create Figma file from this spec (2 days), Designer review (Day 3).

Success Criteria: Feed loads <1s mobile, 90% users reach roadmap in <5 clicks. Export as Figma JSON/Markdown via plugin.
